Electrical and Electronics Engineering Technology

The Bachelor of Science in Electrical and Electronics Engineering Technology (BSEET) program, prepares the student for a position as a technologist, in industries such as aerospace, computers, communications, biomedical, chemical, power etc. and many other federal engineering job positions. Students are offered a wide range of training in topics such as instrumentation, automation and controls, microelectronics, communications, motors and generators, computer applications, programming and interfacing. Moreover, the program emphasizes written and oral communications skills as well as modern methods of industrial administration and supervision. The students of this program will have to complete 129 credit hours in total to get a degree in BSEET.
