Emergency Alert

Mass Notification System

The DSU Emergency Alert system enables the University to provide timely notification of any potential or actual emergency / threat that may exist ? whether it is a weather event, an environmental mishap such as a chemical leak, a fire, a criminal threat or any other type of emergency. In the case of any such emergency, DSU will have the capability to contact you immediately via cell phone (both voice and text message), home or residence hall phone, email, Facebook and Twitter, to inform you of what has transpired and what precautions are needed. The DSU Emergency Alert broadcasts messages to any and all means of contact provided; therefore, it is incumbent upon the University community to provide and update contact information as it becomes available and/or changes. Instant Alert - Honeywell [1]

Please read the disclaimer in bold print, and click the logo below it to log-in and subscribe to the DSU Emergency Alert [1]system!

Disclaimer: Any and all information requested by Delaware State University (DSU) is strictly for the purposes of the DSU Emergency Alert system. The University will not under any circumstances distribute or sell any of the information provided; unless express consent is given by the provider. The information requested will be stored internally and used to instantly alert the provider of any and all emergencies that may provide a clear and present danger. If in fact the information requested is not provided, the University will not be held liable or responsible if individual parties cannot be reached in the case of an emergency.

DOMPDF_ENABLE_REMOTE is set to FALSE
