

Graduate Degree Programs

The road to finding the career you want can be challenging, but it is easier with the right education and training. Such is the case with the education and training you will receive with a Masters degree in either Plant Science, Natural Resources, Animal Science or Agriculture Education (MAT) from Delaware State University. Students in these programs work closely with the faculty in their fields of study and interact with local specialists from federal and state agencies and organizations including NOAA, DNREC, USDA-ARS and the Delaware Department of Agriculture to gain vital knowledge and experience.

The [Department of Agriculture & Natural Resources](#) [1] offers the following master's degree programs.

Degree programs

[Animal Science](#) [2]

[Natural Resources](#) [3]

[Plant Science](#) [4]
